1. Claims 1-20 are allowed.

Independent claims 1, 10, 19-20 recite "...coding the video signal in a progressive video coder so as to generate a progressive coded video bit stream comprising a plurality of frames of the video signal, wherein the progressive coded video bit stream is configured to be decodable at any one of a series of increasing bit rates up to a maximum bit rate, depending on which of a number of corresponding portions of the progressive coded video bit stream are received by a decoder, the portions being arranged within the progressive coded video bit stream in a predetermined sequence of increasing bit rates from an initial portion associated with a lowest one of the bit rates to a final portion associated with a highest one of the bit rates, and wherein each of the series of increasing bit rates produce progressively better reconstructed video quality at an output of the decoder..." which is a feature that is not obvious nor anticipated over the art of record. Dependent claims 2-9, 11-18 are allowed for the reasons concerning the independent claims.
